Summary

B.Tech Electronics and Computer Science student (CGPA 9.1) with a MERN/Next.js background, building full-stack projects end-to-end – from schema design to auth to deployment. Currently deepening DSA, SQL, and backend fundamentals.

Technical Skills

Languages: JavaScript, Java
Developer Tools: Git, GitHub, Postman, VS Code
Technologies and Frameworks: React, Next.js, Node.js, Express, Socket.IO, REST APIs, JWT, OAuth 2.0, MongoDB, PostgreSQL, Prisma, Better Auth, Tailwind CSS
Concepts: REST Architecture, Authentication and Authorization, Database Design, API Integration

Projects

Backtrack – DSA Spaced Repetition Tool — Next.js, TypeScript, Prisma, PostgreSQL, Better Auth

- Built a full-stack spaced-repetition platform for coding interview prep, where solved problems visually decay from green to red over time based on last-revised timestamp, surfacing forgotten problems for review
- Implemented secure authentication with Better Auth – email/password signup with verification, Google OAuth with automatic account linking, session-based protected routes, and route-level middleware
- Designed a relational schema (User, Pattern, Problem, Revision) with cascading deletes and indexed queries; built RESTful CRUD APIs using Next.js Route Handlers with ownership-scoped mutations
- Planned next: topic-level weakness analytics, Razorpay-gated premium features, and Gemini API integration

Real-Time Chat Application — React, Node.js, Express, MongoDB, Socket.IO

- Built a full-stack real-time messaging platform using Socket.IO for bi-directional communication between users
- Designed REST APIs for conversations and message handling with JWT-based access-token authorization
- Designed MongoDB schemas for users, conversations, and messages

AI-Powered Resume and Job Description Analyzer — Python, FastAPI, Sentence-BERT, React, Groq API

- Owned the entire backend for a college deep-learning lab project – a resume screening tool using Sentence-BERT embeddings to capture semantic similarity between resume and job description, instead of ATS-style keyword matching
- Designed a 3-pass skill-gap analysis algorithm – the final pass compares embeddings of matched vs. unmatched skills to infer related/transferable skills (e.g., inferring Express.js familiarity from Node.js experience)
- Integrated Groq API to generate career insights (resume gaps, skills to learn, ATS tips)

Education

Shri Ramdeobaba College of Engineering and Management (RCOEM) — Nagpur, India
B.Tech in Electronics and Computer Science - CGPA: 9.1 — *2023 – 2027*

Certifications

Namaste React - Akshay Saini: Completed in-depth React course covering React internals, hooks, state management, and performance optimization
